Pixelarity

About

- Simple yet robust image editing plugin / library
- Bundles complex facial recognition techniques into a simple API
- Also ships with all the features expected from an image editor
- Cropping, rotation, filters

Why Pixelarity

- Extremely simple API

- Face recognition — facial recognition is bundled with the library, making it easy for developers to add features that rely on facial recognition to their apps

- It bundles a large variety of image editing features and utilities

- These features make it extremely easy to write even a Snapchat clone in relatively few lines of code

- Other libraries have pitfalls that make them difficult to use

Licensing

- Licensed under the MIT license
- Easy to integrate into your codebase without licensing conflicts

Revenue Model

- API hosted on Heroku

- Initial server costs nil

- Free for 20 API calls a day, +$.50 for every following 100 API calls per day

- Automatic scaling with increased API calls

- The profits cover the cost of maintaining Pixelarity

Conclusion

- We look forward to seeing what developers build with Pixelarity
- Thanks to Kabir Goel, Rohan Dhar and Akshay Khandelwal for helping with the pitch, video and website.
